

FO splice closure compact

The design of the closure is so constructed, that it can be used as termination or pass-through closure. The closure can be buried in the earth, installed in cable shafts, poles or walls.

The closure possesses very compact outdoor dimensions from 194 mm x 232 mm x 42 mm (LxWxH) and a robust housing. The small required space allows the installation of the closure in small and tight rooms, without the loss of functionality.

The four cable - openings on each corner of the closure allows the installer flexibility. The very flexibility sealing technology allows the use of flat or round cable with up to 9 mm outer-diameter.

With the optional cable bracket and strain relief set is the closure also suitable for use with loose tube mini cable.

Art.-No.	Description	PU
015XH	Compact closure, small and flat, splice holder integrated (delivery unassembled)	1
